

# Payment Channel Security Tips

Do not set a common password or PIN for all your payment methods

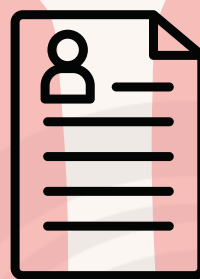

Do not share card details, username, or password with anyone.

Use multi-factor authentication for added protection, if available.

Avoid scanning QR codes received through messages, emails, or social media.

Avoid using personal details like date of birth, mobile number, or family names as your password or PIN.

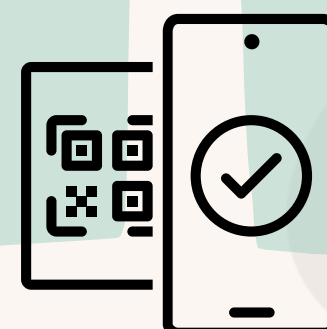

Check SMS or email alerts for every transaction.

Use only official banking or payment apps from trusted app stores.

Regularly clear browser cache and history to protect payment-related information.

Log out and close the app after completing a transaction.

Avoid installing remote access applications on devices used for payments.
